DEVOPS ENGINEER

AWS Certified Solutions Architect & DevOps Engineer with 3 years of experience in building and managing scalable, secure, and automated AWS cloud infrastructure. Experienced in CI/CD pipelines using AWS CodePipeline and CodeBuild, Infrastructure as Code (Terraform), and container orchestration with Kubernetes and Docker. Strong expertise in monitoring using Prometheus and Grafana, database automation, and SonarQube-based code quality enforcement, aiming to deliver reliable, high-availability, and secure cloud-native solutions using DevSecOps best practices.

TECHNICAL SKIILS

- **Cloud Platforms**: AWS (EC2, S3, Route53, IAM, ACM, VPC, ALB, EKS), Azure.
- **Containerization & Orchestration**: Docker, Kubernetes, Helm
- **CI/CD Tools**: Jenkins, AWS CodePipeline, Maven
- **Infrastructure as Code (IaC)**: Ansible, Terraform
- **Monitoring & Logging**: Prometheus, Grafana, AWS CloudWatch.
- **Version Control**: Git, GitHub
- **Scripting & Automation**: Bash, Python, Shell Scripting
- **Networking**: Load Balancing, DNS, VPN, TCP, UDP.
- **Operating Systems:** Linux, Windows

PROFESSIONAL EXPERIENCE

Puthur InfoTech Pvt. Ltd., Noida, Uttar Pradesh — *DevOps Engineer*

December 1, 2023 – Present

- Designed and implemented fully automated CI/CD pipelines using AWS CodePipeline, reducing deployment time by 50% and increasing deployment frequency by 75%.
- Orchestrated Docker container clusters using Kubernetes, enabling seamless scaling and management of microservices architecture.
- Designed and deployed highly available cloud infrastructure using Terraform, enabling Infrastructure as Code (IaC) and reducing manual provisioning errors by 80%.
- Managed and automated AWS resources (EC2, S3, IAM, VPC, EKS, ACM, Route53) using Terraform modules and state management best practices.
- Created reusable and parameterized Terraform modules for consistent and scalable infrastructure deployment across multiple environments (DEV, SIT, STAGING, PROD).
- Used Terraform Remote Backends (S3 with state locking via DynamoDB) for secure and team-friendly infrastructure management.
- Developed Terraform modules to standardize infrastructure provisioning across multi-cloud environments.
- Automated provisioning and management of AWS RDS and DynamoDB using Terraform with secure state management and backups.
- Automated infrastructure provisioning and configuration management using Ansible, reducing manual intervention by 60%.
- Developed and maintained shell scripts for automating routine tasks, improving operational efficiency.
- Collaborated with cross-functional teams to implement Git workflows, including branching, merging, and pull requests, ensuring efficient version control.
- Optimized cloud infrastructure costs by implementing auto-scaling and load balancing strategies on AWS.
- Integrated SonarQube static code analysis into CI/CD pipelines using AWS CodePipeline and AWS CodeBuild to enforce code quality and security standards.
- Configured SonarQube Quality Gates to fail builds on code smells, vulnerabilities, and low test coverage, preventing defective code from reaching production.
- Configured and maintained Prometheus and Grafana for Springboot microservice application performance monitoring, identifying and resolving performance bottlenecks.

Cloud Support Engineer Brown Labs Pvt. Ltd., Gurgaon, Haryana

February 15, 2023 – April 30, 2023

- Provided Tier 2/3 cloud support for production workloads on AWS/Azure, troubleshooting compute, storage, networking, and IAM issues to meet SLA targets.
- Diagnosed and resolved complex infrastructure and application issues using logs, metrics, and tracing tools, reducing incident resolution time by 50%.
- Supported and optimized cloud-native services (EC2/VMs, Kubernetes, Load Balancers, RDS) to improve reliability and performance.
- Automated routine operational tasks using Python/Bash and Infrastructure as Code (Terraform/CloudFormation), improving efficiency and reducing manual errors.
- Collaborated with DevOps, SRE, and engineering teams to root-cause incidents, implement preventive fixes, and improve system resilience.
- Assisted customers with cloud architecture guidance, security best practices, cost optimization, and migration issues.

Cloud Support Engineer – IDC Technologies Pvt. Ltd., Gurgaon, Haryana
July 21, 2022 – February 6, 2023

- Basic knowledge of cloud platforms (AWS/Azure) and core services like compute, storage, and networking
- Assisted in monitoring cloud resources and identifying common issues using dashboards and alerts
- Performed basic troubleshooting for virtual machines, connectivity, and access-related problems
- Used ticketing tools to track issues and followed standard incident resolution procedures
- Demonstrated strong learning ability, communication skills, and customer support mindset

CERTIFICATION

AWS CERTIFIED SOLUTIONS ARCHITECT - Associate

EDUCATION

- MBA in Information Technology Swami Vivekanand Subharti University | 2023-2025
- Graduation Bachelor of Science from CSJM University, Kanpur | 2020-2023
- PG in Cloud Computing and DevOps – Intellipaat
